## European Technical Assessment

**ETA-12/0528  
of 30/09/2015**

### General Part

**Technical Assessment Body issuing the European Technical Assessment** Instytut Techniki Budowlanej

**Trade name of the construction product** R-KEM II / R-KEM II-S / R-KEM II-W and RM50 / RM50-S / RM50-W

**Product family to which the construction product belongs** Injection anchors for use in masonry

**Manufacturer** RAWLPLUG S.A.  
ul. Kwidzyńska 6  
51-416 Wrocław  
Poland

**Manufacturing plant** Manufacturing Plant No. 3

**This European Technical Assessment contains** 26 pages including 3 Annexes which form an integral part of this Assessment

**This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of** Guideline for European Technical Approval "Metal injection anchor for use in masonry", ETAG 029, Edition April 2013, used as European Assessment Document (EAD)

**This version replaces** ETA-12/0528 issued on 27/06/2013

*This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.*

*Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.*

## Specific Part

### 1 Technical description of the product

The injection system R-KEM II / R-KEM II-S / R-KEM II-W i RM50 / RM50-S / RM50-W is a bonded anchors (injection type) consisting of a injection mortar cartridge, a perforated sleeve and an anchor rod with hexagon nut and washer. Anchor rods are made of galvanized carbon steel, stainless steel or high corrosion resistant stainless steel.

The anchor rod is placed into a drilled hole previously cleaned and filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry.

An illustration and the description of the products are given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The performances given in Section 3 are only valid if the anchors are used in compliance with the specifications and conditions given in Annex B.

The performances given in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or the Technical Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Performance of the product

##### 3.1.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for tension and shear loads	Annexes C1 to C4
Characteristic resistance for bending moments	Annex C4
Displacements under shear and tension loads	Annexes C5 to C8
Reduction factor for job site tests ( $\beta$ -Factor)	Annex C9
Edge distance and spacing	Annex C9

##### 3.1.2 Safety in case of fire (BWR 2)

No performance assessed.

##### 3.1.3 Hygiene, health and the environment (BWR 3)

Regarding the dangerous substances clauses contained in this European Technical Assessment, there may be requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction

Products Regulation, these requirements need also to be complied with, when and where they apply.

#### **3.1.4 Safety in use (BWR 4)**

For Basic Requirement Safety in use the same criteria are valid as for Basic Requirement Mechanical resistance and stability (BWR 1).

#### **3.1.5 Sustainable use of natural resources (BWR 7)**

No performance assessed.

### **3.2 Methods used for the assessment**

The assessment of fitness of the anchors for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of Basic Requirements 1 and 4 has been made in accordance with the ETAG 029 "Metal injection anchor for use in masonry".

## **4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

According to Decision 97/177/EC of the European Commission the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table applies.

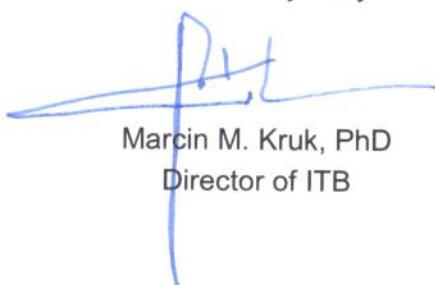

Product	Intended use	Level or class	System
Metal injection anchors for use in masonry	Fixing and/or support to masonry, structural elements (which contribute to the stability of the works) or heavy units such as cladding as well as installation	-	1

## **5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document (EAD)**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan which is deposited at Instytut Techniki Budowlanej.

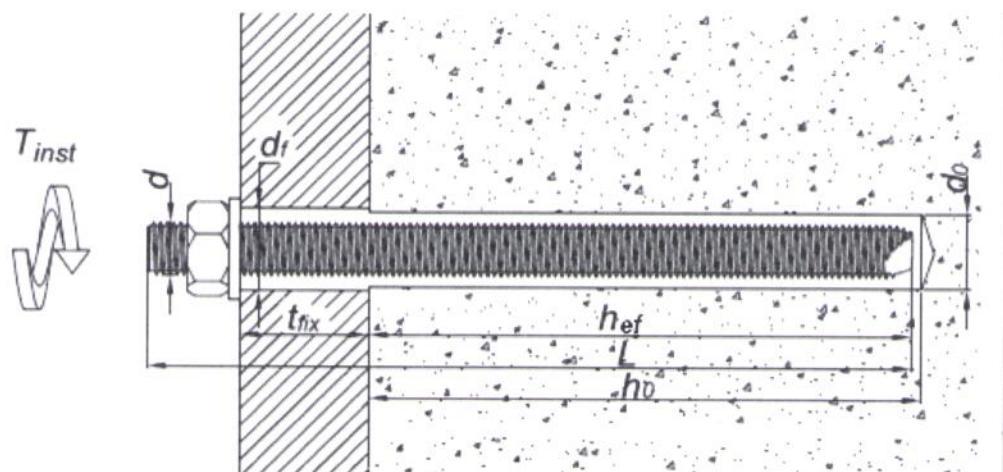

For type testing the results of the tests performed as part of the assessment for the European Technical Assessment shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between Instytut Techniki Budowlanej and the notified body.

Issued in Warsaw on 30/09/2015 by Instytut Techniki Budowlanej

Washer	Steel, acc. to EN ISO 7089; electroplated $\geq 5 \mu\text{m}$ acc. to EN ISO 4042 or hot-dip galvanized $\geq 45 \mu\text{m}$ acc. to EN ISO 10684	Material 1.4401, 1.4404, 1.4571 acc. to EN 10088; corresponding to anchor rod material	Material 1.4529, 1.4565, 1.4547 acc. to EN 10088; corresponding to anchor rod material

Commercial standard threaded rods (in the case of rods made of galvanized steel – standard rods with property class  $\leq 8.8$  only), with:

- material and mechanical properties according to Table A1,
- confirmation of material and mechanical properties by inspection certificate 3.1 according to EN-10204:2004; the documents shall be stored,
- marking of the threaded rod with the embedment depth.

Note: Commercial standard threaded rods made of galvanized steel with property class above 8.8 are not permitted in some Member States.

Product description Materials	of European Technical Assessment ETA-12/0528

### Specification of intended use

#### Anchors subject to:

Static and quasi-static loads: sizes from M8 to M16.

#### Base materials:

- Solid clay bricks (use category b), according to Annex B7.
- Autoclaved aerated concrete blocks AAC (use category d), according to Annex B7.
- Solid silicate bricks (use category b), according to Annex B7.
- Silicate hollow blocks (use category c), according to Annex B7.
- Perforated ceramic blocks (use category c), according to Annexes B7 and B8.
- Lightweight concrete hollow blocks (use category c), according to Annex B8.

Mortar strength class M2,5 at minimum according to EN 998-2.

For smaller brick size or smaller compressive strength in solid masonry or other bricks and blocks in hollow or perforated masonry the characteristic resistance of the anchor may be determined by job site tests according to ETAG 029, Annex B under consideration of the β-factor according to Annex C9.

#### Temperature range:

The anchors may be used in the following temperature range:

- -40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C).
- -40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C).

#### Use conditions (environmental conditions):

- Elements made of galvanized steel may be used in structures subject to dry internal conditions.
- Elements made of stainless steel may be used in structures subject to dry internal conditions and also in concrete subject to external atmospheric exposure (including industrial and marine environment) or exposure in permanently damp internal conditions if no particular aggressive conditions exist. Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).
- Elements made of high corrosion resistant stainless steel may be used in structures subject to dry internal conditions and also in concrete subject to external atmospheric exposure or exposure in permanently damp internal conditions or in other particular aggressive conditions. Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

#### Use categories:

- b, c, d base materials.
- w/w installation and use.

#### Installation:

- Dry or wet structures.
- Hole drilling by rotary drill mode (AAC, hollow and perforated masonry) and hammer drill mode (solid masonry).

#### Design:

- Verifiable calculation notes and drawings are prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.
- The anchorages are designed in accordance with to ETAG 029, Annex C, design method A under the responsibility of an engineer experienced in anchorages and masonry work.

of European  
Technical Assessment  
ETA-12/0528

1. Drill the hole to the required diameter and depth (hammer drilling for solid masonry and rotary drilling for AAC).
2. Clean the hole with brush and hand pump: at least four blowing operations then four brushing operations followed again by four blowing operations.
3. Insert cartridge into gun and attach nozzle. Dispense to waste until an even colour is obtained.
4. Insert the mixing nozzle to the far end the hole and inject the resin, slowly withdrawing the nozzle as the hole is filled to 70% of it's depth.
5. Immediately insert the stud, slowly and with slight twisting motion. Remove any excess resin around the hole before it sets.
6. Leave the fixing undisturbed until the curing time elapses.
7. Attach the fixture and tighten the nut (max. torque acc. to Table B1).
