

Induction hardened concrete screw

ETA - 23/0707

* Positive results of seismic tests C1-C2 (soon in ETA) * Positive results of fire tests R30-R120 (soon in ETA)

FEATURES AND BENEFITS

The new thread shape with additional cutting teeth ensures quick and easy installation, also in reinforced concrete C20/25 - C50/60.

The highest parameters in cracked and uncracked concrete C20/25 - C50/60 confirmed in the ETA.

Zinc flake ZF coating with increased anti-corrosion resistance.

Multiple installations for temporary fixings.

R-HLX concrete screws can be used in earth-quake-prone zones - seismic category C1 and C2.*

Induction hardening ensures high surface hardness and high core impact strength.

Possibility of installation near the concrete edge and at reduced spacing between adjacent screws.

Various head types for a wide range of applications.

Concrete screws have a fire resistance certificate.*

The design of concrete screws allows drilling and installation directly through the fastened element.

Polish production - the production of screws takes place in one of the largest and most reputable cold forging factories in Europe, with experience in the automotive and industrial sectors.

The production of concrete screws takes place on bar stock, manufactured in a Polish steel mill.

Rawlplug, in the process of applying Zinc Flake coating, does not use acid etching, thereby avoiding the hydrogen embrittlement of screws.

Concrete screw made of manganese steel, characterized by increased yield strength and greater resistance to abrasion.

* Positive results of seismic tests C1-C2 (soon in ETA) * Positive results of fire tests R30-R120 (soon in ETA)

SUBSTRATES

Unreinforced concrete,

Solid masonry (after site testing)

R-HLX CARBON STEEL CONCRETE SCREW WITH ZINC FLAKE COATING FOR CRACKED AND UNCRACKED CONCRETE

The R-HLX concrete screw has a new thread geometry with additional cutting teeth that ensures quick and easy installation, also in reinforced concrete C20/25-C50/60

APPLICATIONS 🗸

Railings and balustrades	
Ventilated facades	
Steel structures, shelves	
Stadium seats	
Fences and gates	
Bumpers	
Temporary fixings	
Formwork	

R-HLX CARBON STEEL CONCRETE SCREW WITH ZINC FLAKE COATING FOR CRACKED AND UNCRACKED CONCRETE

INSTALLATION INSTRUCTIONS \checkmark

INSTALLATION

- 1. Drill the hole with a hammer drill (1a) or a dust-free drill (1b) to the required depth according to the table.
- 2. Clean the hole (blow dust at least 4 times with the hand pump). When using a dust-free drill bit (1b), it is not necessary to clean the hole.
- 3. Screw the concrete screw into the hole with an impact wrench and a suitable impact socket. Tighten until the fixture is clamped to the substrate. Installation with any tangential impact wrench.

4. Finish screwing when the screw head touches the fastened element/substrate. The screw head must not be damaged.

ADJUSTABLE*

- 1. Possibility to unscrew the fixed anchor to a maximum height of 10 mm. In the adjustment process, the permissible thickness of the fastened elements (Tfix) must be observed.
- 2. Adjust the element and tighten until the fixture is clamped to the substrate. Installation with any impact wrench with tangential impact.
- 3. Finish screwing when the anchor presses the fastened element (substrate). The adjustment operation can be performed twice.

* Coming soon to ETA
