

R-MBA

STEEL FACADE FIXING

Fire-resistant metal insulation fixing

FEATURES AND BENEFITS

Metal facade fixing, recommended for use when fire resistance (R120) is a requirement

Fast and simple hammer-set installation reduces working time. Extensive dimensional range allows anchorage of insulation boards up to 250 mm thick

For soft thermal insulation, we recommend installation with an additional MKC-85 steel washer (diameter 85 mm)

Made of galvanized steel, resistant to damage and corrosion

For countersunk installation, we recommend using the R-KFS-90/20 cutter and the R-TFIX-CAP90-MW mineral wool cup

BASE MATERIALS

Concrete C20/25-C50/60

Solid Brick

Solid Sand-lime Brick

Aerated concrete

Ceramic Hollow Block

Hollow Sand-lime Brick
≥ 15MPa

The R-MBA metal facade fixing is classified in class A1 for fire and is recommended for applications with the required fire resistance R120. A wide range of facade fixing lengths (90-300 mm) makes it possible anchoring of thermal insulation boards up to 250 mm thick. For soft insulation materials we recommend mounting the anchors with a dedicated MKC steel washer with a diameter of 85 mm. For countersunk installation, we recommend using the R-KFS-90/20 cutter and the R-TFIX-CAP90-MW mineral wool cap.

APPLICATIONS

Mineral wool (MW) boards

Glass wool

Lightweight wood wool building boards

Lightweight recycled panels

Polystyrene (EPS) boards

Polyurethane (PU) boards

INSTALLATION GUIDE

1. Drill a hole of required diameter and depth
2. Clean the drilled hole 3x.
3. Gently drive the steel dowel into the hole until the correct anchorage depth for the fastener is achieved. For soft substrates, use the MKC 85 mm steel washer
4. Correctly installed steel facade fixing

PRODUCT INFORMATION

Size	Product Code	Fixing			Fixture
		Diameter	Length	Plate diameter	Max. thickness
		d	L	D	t _{fix, max}
